

Rules

- At the beginning of the game, you choose your one lucky briefcase out of 26 (Each briefcase randomly contains cash value from \$1 - \$1,000,000)
- Then the game starts, and the goal is to eliminate cases that you think have the lower amounts of cash.

- After several opened boxes, you will receive a proposition from the banker. You will have an option to accept his deal, or to keep playing, trying your further luck

- Once only 2 boxes remain (the one you picked and the last one available) You will have again 2 options: Either keep your case or choose the banker's deal
